

Karan Singh

Full Stack Developer

Jagatpura, Jaipur, India | +91 7300232681 | onemonth06@gmail.com | [LinkedIn: karnVen](#) | [GitHub: karnVen](#)

PROFILE

Second-year BCA student and full stack developer with hands-on, production experience across fintech (Laravel/PHP), custom web platforms (React/Node.js), and AI-driven automation (n8n). Currently working as a Developer at EasyTax Global IT Solutions Pvt. Ltd., where I redesigned and shipped a production dashboard used daily by hundreds of agents and led a full website redesign, alongside earlier experience architecting a company website end-to-end at Savings Yogi. Looking to keep building shipping-focused software with a long-term goal of working internationally.

WORK EXPERIENCE

Developer | EasyTax Global IT Solutions Pvt. Ltd. | *Bhamashah Techno Hub, Jaipur*

April 2026 – Present

- Owned the end-to-end redesign of a Laravel-based multi-role platform serving agents, admins, and internal users, re-architecting the UI/UX and delivering several new features; the rebuilt system now runs in production and handles daily application submissions and payments for hundreds of active agents.
- Drove a ground-up redesign of the company's Drupal-based marketing website, engineering new revenue and growth-focused capabilities — including a lead-generation pipeline, on-site SEO optimization, and an integrated payment flow — alongside a polished, animated homepage that elevated the brand's online presence.

Technical Solutions Intern – Web Development | Savings Yogi | *Frisco, TX (Remote)*

February 2026 – March 2026

- Solely responsible for architecting and building the official company website from scratch, translating business requirements into a responsive, high-performance web application.
- Designed and implemented a custom Content Management System (CMS), enabling non-technical staff to update site content dynamically without code intervention.
- Managed the full deployment lifecycle, ensuring cross-browser compatibility and optimized load times.
- Delivered a functional product within weeks of starting, demonstrating the ability to work independently and hit aggressive deadlines.

PROJECTS

GitPost | n8n, GitHub, LinkedIn, AI-Powered

- An n8n automation workflow that watches a GitHub repository: on every push, an AI agent analyzes the commit messages and automatically writes and publishes a LinkedIn post about the update.

Code: [GitHub Repo](#)

EduVen | HTML5, CSS3, Spline, n8n, GitHub

- An interactive educational platform combining standard learning resources with immersive 3D models, a smart syllabus chatbot, and gamified, automation-powered learning.

Code: [GitHub Repo](#) Demo: [Live Preview](#)

ShellOrigin | C, Linux, System Programming

- A custom Unix shell implementation replicating process creation, memory allocation, and signal handling at the system level.

Code: [GitHub Repo](#)

HakiVen | Firebase, Firestore, JavaScript, HTML5, CSS3

- A web-based study tracker where students log daily activities via Firestore-backed forms, rendered into dashboards for analyzing where their time goes.

EDUCATION

Bachelor of Computer Applications (BCA) | Jaipur National University (JNU) | *Jaipur, India*
2024 – 2027 (2nd Year)

- Specialized in Full Stack Development, with proficiency in Java, C++, and Data Structures & Algorithms.
- Designed scalable web applications using React.js and Node.js, integrating Firestore for real-time data storage.
- Engineered automated workflows with n8n and AI agents, bridging backend logic and user-facing interfaces.
